

USER STORIES DOCUMENT

Food & Grocery Delivery Analytics Platform

1. DOCUMENT INFORMATION

Field	Value
Project Name	Food & Grocery Analytics
Prepared By	Business Analyst
Version	1.0
Date	May 2026

2. PROJECT EPICS

Epic ID	Epic Name	Description
EP-1	Restaurant Analytics	Analyze restaurant performance
EP-2	Grocery Analytics	Analyze grocery products and categories
EP-3	Dashboard Reporting	Interactive KPI dashboards
EP-4	Cloud Data Warehouse	BigQuery integration
EP-5	Data Cleaning	Data quality and validation
EP-6	Access Management	Role-based permissions

3. USER STORIES

Story ID	Epic	User Story	Priority	Sprint
----------	------	------------	----------	--------

US-1	Restaurant Analytics	As a business user, I want to analyze restaurant ratings by city so that I can identify top-performing locations.	High	Sprint 1
US-2	Restaurant Analytics	As a data analyst, I want to track delivery times so that operational delays can be monitored.	High	Sprint 1
US-3	Grocery Analytics	As a business user, I want to analyze grocery categories so that product trends can be identified.	High	Sprint 2
US-4	Dashboard Reporting	As a stakeholder, I want interactive filters so that I can drill down into specific cities and cuisines.	High	Sprint 2
US-5	Cloud Warehouse	As a data analyst, I want datasets stored in BigQuery so that analytics queries can scale efficiently.	Medium	Sprint 3
US-6	Data Cleaning	As a business analyst, I want cleaned datasets so that dashboard KPIs remain accurate.	High	Sprint 1
US-7	Access Management	As an admin, I want role-based access so that only authorized users can view dashboards.	Medium	Sprint 3
US-8	KPI Monitoring	As an operations manager, I want to monitor average ratings and reviews so that customer satisfaction can be measured.	High	Sprint 2

4. ACCEPTANCE CRITERIA

US-1 — Restaurant Ratings by City

Acceptance Criteria

- Dashboard should filter ratings by city
 - Ratings should display correctly
 - Charts should refresh dynamically
-

US-2 — Delivery Time Tracking

Acceptance Criteria

- Delivery time KPI should display correctly
 - Average delivery time should calculate accurately
 - Users should filter by city
-

US-3 — Grocery Category Analysis

Acceptance Criteria

- Dashboard should show grocery category charts
 - Users should analyze top categories
 - Data should refresh successfully
-

US-4 — Interactive Dashboard Filters

Acceptance Criteria

- Filters should refresh all visuals dynamically
 - Multiple filters should work simultaneously
 - Charts should update within 5 seconds
-

US-5 — BigQuery Integration

Acceptance Criteria

- BigQuery tables should load successfully
 - SQL queries should execute without errors
 - Data refresh should complete successfully
-

US-6 — Data Cleaning

Acceptance Criteria

- Blank rows removed

- Duplicate rows removed
 - Ratings standardized
 - Delivery time converted correctly
-

US-7 — Role-Based Access

Acceptance Criteria

- Viewer role should access dashboards
 - Editor role should modify datasets
 - Unauthorized users should be restricted
-

US-8 — KPI Monitoring

Acceptance Criteria

- KPI cards should display accurate values
 - Ratings and review metrics should update dynamically
 - Dashboard performance should remain stable
-

5. STORY PRIORITIZATION

Priority	Description
High	Core analytics and dashboard functionality
Medium	Security and scalability features
Low	Future enhancements

6. SPRINT PLANNING OVERVIEW

Sprint	Focus Area	Stories
Sprint 1	Data Cleaning & Import	US-1, US-2, US-6

Sprint 2 Dashboards & Analytics US-3, US-4, US-8

Sprint 3 BigQuery & Security US-5, US-7

7. DEFINITION OF DONE (DoD)

- Dashboard visuals validated
 - SQL queries tested successfully
 - Data quality checks completed
 - Acceptance criteria approved
 - Documentation updated
-

Deployment

9. INTERVIEW EXPLANATION

“I created user stories and sprint planning documentation for the Food & Grocery Analytics platform following Agile Scrum methodology. I defined epics, acceptance criteria, sprint priorities, and KPI-driven analytics requirements for dashboards and cloud reporting.”
